#### **DETAILED ACTION**

### Response to Arguments

Applicant's arguments with respect to all the pending claims have been considered but are most in view of the new ground(s) of rejection.

#### Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "20" has been used to designate both projectile body and projectile base. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

#### Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 7-9, 13, 20, 21, 25 and 26 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 7 and 20 recites the limitation "said cylindrical wall" and "said forward wall". There is insufficient antecedent basis for this limitation in the claim.

Claims 8 and 21 recites the limitation "said payload". There is insufficient antecedent basis for this limitation in the claim.

Claim 9 recites the limitation "said projectile base". There is insufficient antecedent basis for this limitation in the claim.

Claims 9, 25 and 26 recites the limitation "said projectile base". There is insufficient antecedent basis for this limitation in the claim.

As to claims 13 and 26, "a cylindrical wall" and "a forward wall" is confusing as whether they define all in addition to the walls of claim 7.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 5-15, 18-22, 24-28, 30 and 31 are rejected under 35 U.S.C. 102(e) as being anticipated by Klein (2004/0069177).

As to claim 1, Klein discloses a projectile nose (20 and 71) joined to a projectile base (15); said projectile nose comprising a cavity (the area filled by the material 28, fig. 2); and said projectile nose composed of a frangible, rigid, polymer foam material (styrofoam).

As to claims 2, 15 and 28, disclosed is the nose having a rounded forward wall and cylindrical wall (71, fig. 1), said cylindrical wall being thinner than the forward wall (20; fig. 2).

As to claim 5, disclosed is a payload (28 and 30) in the cavity.

As to claims 6, 8, 19, 21 and 30, disclosed is a marker (30).

As to claims 7, 20 and 31, disclosed is a rear plug (75) wall joined to said cylindrical wall (71), the combination of the forward (rear part of 20), cylindrical wall (20) and the plug defining said nose cavity (fig. 2).

As to claim 9, disclosed is the plug joined to the projectile base (15).

As to claims 11, 12, 24 and 25, disclosed is a forward wall (41) and a cylindrical wall (16).

As to claims 13 and 26, disclosed is a forward wall and a cylindrical wall (71) and the rear plug is joined to said forward wall of said projectile base.

As to claim 14, disclosed is a projectile nose (18) and a projectile body (15) separably joined to a shell (12) comprising a propulsion means (80); said projectile nose comprising a cavity (fig. 2) and composed of a frangible, rigid, polymer foam material (styrofoam) which is capable of being crushed upon impact and inherently absorbs and dissipates energy on impact [0050].

As to claim 18, disclosed is a payload (28 and 30) in the cavity and capable of dispersing laterally.

As to claim 22, disclosed is the plug joined to the projectile base (15).

As to claim 27, disclosed is a projectile nose (18) and a projectile body (15) separably joined to a shell (12) comprising a propulsion means (80); said projectile nose comprising a cavity (fig. 2) and composed of a frangible, rigid, polymer foam material (styrofoam) which is capable of being crushed upon impact and inherently absorbs and dissipates energy on impact [0050] and a payload (28 and 30) in the cavity and capable of dispersing laterally and inherently dissipating energy.

## Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 3, 10, 16, 23 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Klein (2004/0069177) further in view of Royer (3732821)

As to claims 3, 16 and 29, not disclosed is the foam material having a density between approximately 8 and 14 pounds per cubic foot. Royer, however, discloses a foam having a density between approximately 8 and 14 pounds per cubic foot (col. 3, lines 22-24). It would have been obvious to one having ordinary skill in the art at the time the invention was made to comprise the foam of Klein with the density ranges as taught by Royer to ensure the non-lethal properties of the projectile.

As to claims 10 and 23, not disclosed is the foam comprised of polyurethane. Royer, however, discloses a polyurethane foam (col. 3, lines 22-24). It would have been obvious to one having ordinary skill in the art at the time the invention was made to comprise the foam of Klein with the polyurethane material as taught by Royer to ensure the non-lethal properties of the projectile.

#### Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
